3. Equations and their Graphs

- 3.1 Use the Rectangular Coordinate System
 - 3.1 Exercise Set, page 312 (294): 1, 5, 7, 11, 15, 19, 25
- 3.2 Graph Linear Equations in Two Variables
 - 3.2 Exercise Set, page 346 (328): 1, 3, 21, 25, 27, 33
- 3.3 Graphs with Intercepts-optional
 - 3.3 Exercise Set, page 373 (355): 10,16
- 3.4 Understand Slope of a Line-optional
 - 3.4 Exercise Set, page 409 (391): 1, 3, 9, 10, 13, 19, 28
- 3.5 Use the Slope-Intercept Form of an Equation of a Line-optional
 - 3.5 Exercise Set, page 451 (433): 1, 4, 7, 9, 25, 29, 37, 42, 44

Exam 2, Friday, 10/24/25, 2.1 - 2.4, 3.1 - 3.5

After class notes

7x -44=6

Find the x-intercept and y-intercept use them to graph the line x-intercept set y=0, solve for y 7x - (4)(0) = 6 (7)(0) - 4y = 6 x = 0

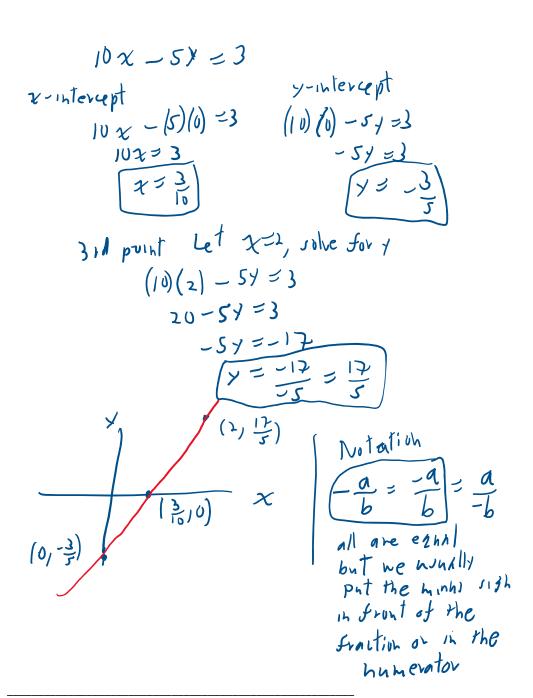

7x 26

0-49-6

Fil a 311 point Let x = 2 7 (7/12) - 44 = 6 14 -4 4 = 6

14-14 -47 =6 -14 (14-14)-4y=-8 0-4y=-8 -4y=-8

Graph the like by Finding and plotting the interception

3.4 Memorize

Slope of a line

The slope of a line of a line is $m=rac{\mathrm{rise}}{\mathrm{run}}$

The rise measures the vertical change and the run measures the horizontal change between two points on the line.

$$m = \frac{\Delta y}{\Delta x} = \frac{y_2 - y_1}{x_1 - x_1}$$

$$\Delta = chance$$

Memorize

Positive and negative slopes

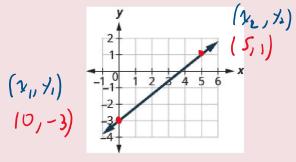

We 'read' a line from left to right just like we read words in English. As you read from left to right, the line is going up; it has positive slope. The line is going down; it has negative slope.

EXAMPLE 1

How to Use $m=rac{\mathrm{rise}}{\mathrm{run}}$ to Find the Slope of a Line from its Graph

Find the slope of the line shown.

Solution

$$M = \frac{\Delta y}{\Delta x} = \frac{y_2 - y_1}{y_2 - y_1} = \frac{1 - (-3)}{s} = \frac{1 + 3}{s} = \frac{1}{s}$$

$$M = \frac{-3 - 1}{0 - s} = \frac{-4}{-s} = \boxed{\frac{4}{s}}$$

Memorize

Horizontal line y = b Vertical line x = a

$$x = \sqrt{10, b}$$

$$y = b$$

$$b = conjtant$$

$$y = \sqrt{20}i$$

$$x = \sqrt{20}i$$

$$y =$$

$$(a,y) = (\chi_{1})\chi_{1} = (4,2)$$

$$(a,0) = (\chi_{1})\chi_{1} = (4,0)$$

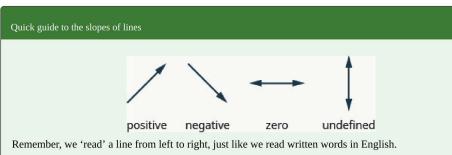

$$J |_{0}pe = h = \frac{vije}{1hh} = \frac{\sqrt{2}-\chi_{1}}{4\sqrt{2}-\chi_{1}}$$

$$\chi = a = \frac{\sqrt{-0}}{4-a} = \frac{y}{0} \quad \text{not defined}$$

$$h = \frac{2-a}{4-a} = \frac{2}{0} \quad \text{not defined}$$

Therefore, a vertical line has no slope.

Memorize

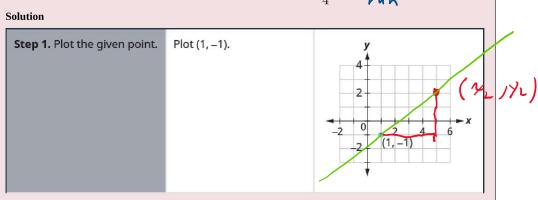

Memorize

$$(x_1, y_1)$$
 read ' x sub 1, y sub 1' (x_2, y_2) read ' x sub 2, y sub 2'

EXAMPLE 7

How To Graph a Line Given a Point and The Slope

Graph the line passing through the point (1,-1) whose slope is $m=\frac{3}{4}$.

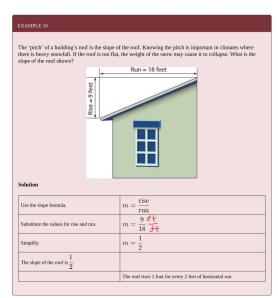

$$x_{1} = 1 + 4 = 5$$
 $\Rightarrow (x_{1})^{1/2} = (5/2)$

Memorize

Graph a line given a point and the slope.

- 1. Plot the given point.
- 2. Use the slope formula $m=rac{\mathrm{rise}}{\mathrm{run}}$ to identify the rise and the run.
- 3. Starting at the given point, count out the rise and run to mark the second point.
- 4. Connect the points with a line.

hee, the units cancel

EVAMDIE 11

Have you ever thought about the sewage pipes going from your house to the street? They must slope down $\frac{1}{4}$ inch per foot in order to drain properly. What is the required slope?

Solution

Use the slope formula.	$m = \frac{\text{rise}}{\text{run}}$ $m = \frac{-\frac{1}{4}\text{inch}}{\frac{1}{4}\text{foot}}$ $m = \frac{-\frac{1}{4}\text{inch}}{12 \text{ indes}}$
Simplify.	$m = -\frac{1}{48}$
	The slope of the pipe is $-\frac{1}{48}$.

The pipe drops 1 inch for every 48 inches of horizontal run.

In the following exercises, find the slope of each line shown.

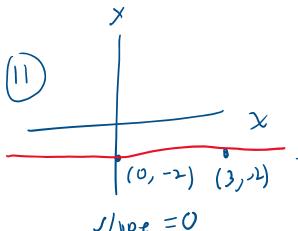

slope =
$$m = \frac{\Delta y}{\Delta x}$$

= $\frac{y_2 - y_1}{x_1 - x_1}$
= $\frac{4 - (-1)}{4 - 0}$
= $\frac{4 + 1}{4}$

3.4 In the following exercises, find the slope of each line.

11.
$$y = -2$$

12.
$$x = -5$$

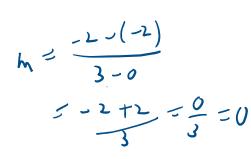

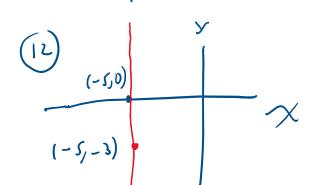

$$m = shpe = \frac{rise}{rhh} = \frac{DY}{DX}$$

$$= \frac{Y_{L} - Y_{L}}{x_{L} - x_{L}}$$

Graph each line.

Hint: plot 2 points on each line.

$$m = \frac{0 - (-3)}{(-s) - (-s)} = \frac{3}{0}$$
 not defined

3.4

In the following exercises, use the slope formula to find the slope of the line between each pair of points.

14. (0,3), (4,6)

Is the slope positive, negative, zero, or not defined?

Plot the points and graph the line containing them.

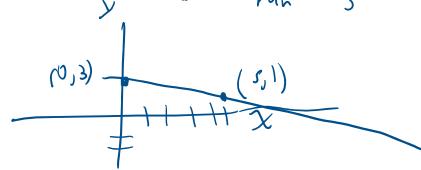

$$m = \frac{y_1 - y_1}{y_1 - x_1} = \frac{6 - 3}{4 - 0} = \frac{3}{4} > 0$$

(0,3) x

(4,6)

In the following exercises, graph each line with the given point and slope.

23. y-intercept 3;
$$m = -\frac{2}{5} = \frac{11e}{14h} = \frac{-2}{5}$$

$$\chi_{2} = \chi_{1} - \lambda_{2} = 3 - \lambda_{2}$$

$$\chi_{2} = \chi_{1} + 5 = 0 + 5$$

3.4: 28

28. A local road has a grade of 6%. The grade of a road is its slope expressed as a percent. Find the slope of the road as a fraction and then simplify. What rise and run would reflect this slope or grade?

. 111 / [2]

the slope of the road as a fraction and then simplify. What rise and run would reflect this slope or grade?

J/Ipe =
$$6\%$$
 = $6\left(\frac{1}{100}\right) = \frac{6}{100} = \frac{3}{50}$
rise = 3
run = 50

3,5 y=mx+b is slope-intercept form of the equation of a line. m = s)upe

Textbook notation

Memorize

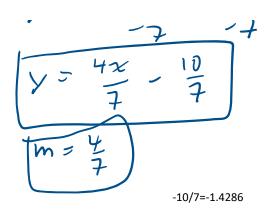

The slope—intercept form of an equation of a line with slope m and y-intercept, (0, b) is, y = mx + b

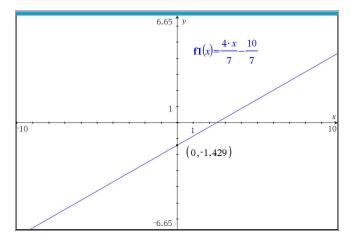

Find the slope of the line given by

and write the equation in slope-intercept form.

$$-\frac{7}{7} = -\frac{4}{2} + \frac{10}{10}$$

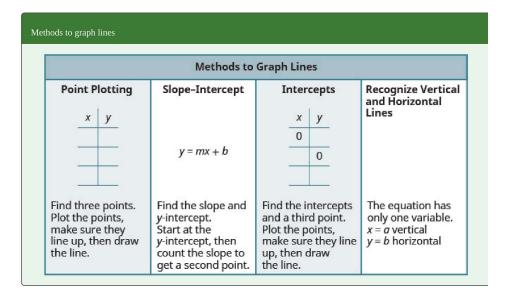

$$\frac{7}{10} = -\frac{4}{10} + \frac{10}{10}$$

TI-nspire graphing calculator

memorize

Memorize

Parallel lines are lines in the same plane that do not intersect.

- Parallel lines have the same slope and different *y*-intercepts.
- If m_1 and m_2 are the slopes of two parallel lines then $m_1=m_2$.
- Parallel vertical lines have different *x*-intercepts.

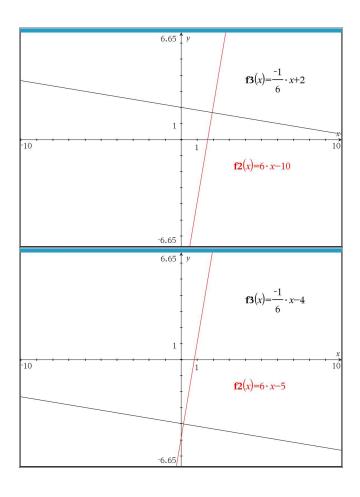

Supplied

Perpendicular lines are lines in the same plane that form a right angle.

If m_1 and m_2 are the slopes of two perpendicular lines, then:

$$m_1\cdot m_2=-1$$
 and $m_1=rac{-1}{m_2}$

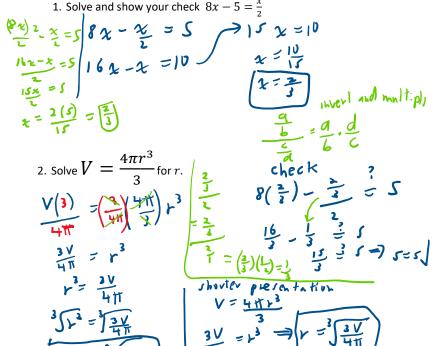

Vertical lines and horizontal lines are always perpendicular to each other.

Your Name MTH 111 bonus quiz 2 Write each problem

1. Solve and show your check $8x - 5 = \frac{x}{2}$

3. Find the slope of the line passing through the points (7, 2)and (10, 16).

slope =
$$\frac{y_2 - y_1}{x_2 - x_1} = \frac{16 - 2}{10 - 2} = \overline{14}$$

4. Write 2x - 9y = 18 in slope-intercept form. -9/=122+18 5. Is the point (0,2) on the line from #4? Why or why not?
